

Clock

image

Coding a JavaScript stopwatch is an easy little project you can build in one day even as a beginner. Your stopwatch needs three buttons for user interaction:

Start Stop Reset

Hangman Game

image

Building a Hangman game is one of the best JavaScript project ideas for beginners who want a bit of a challenge.

If you're not familiar, the hangman game is about guessing a random word by guessing letters one by one. If the player runs out of guesses, the game is over.

Pairs Game

image

Coding a JavaScript memory matching game or pairs game is another fun project you can build for fun (and for your portfolio!).

The logic of the game is simple:

There are a given number of cards on the table facing down. The player needs to find all the pairs. However, you may want to add more difficulty by limiting the number of guesses or by setting a time limit for the game to be finished.
